What is the IDE?

The first IDE

The best IDE (according to some... though not me)

The screenshot shows the Emacs editor window titled 'emacs@sage.lan'. The interface includes a menu bar (File, Edit, Options, Buffers, Tools, Preview, LaTeX, Command, Help) and a toolbar with icons for file operations and PDF generation. The editor is split into three buffers:

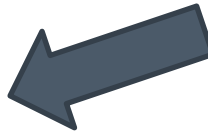

- master.tex** (PDFLaTeX Fill) at 1:12PM 0.17: Contains LaTeX preamble code including `\documentclass[letterpaper,10pt]{book}` and various `\usepackage` statements.
- unixtss.tex** (PDFLaTeX Fill) at 1:12PM 0.17: Contains LaTeX code for a two-column article, including `\documentclass[10pt,twocolumn]{article}` and `\title{The UNIX Time-Sharing System}`.
- Main.cs** (C#/1 Abbrev) at 1:12PM 0.17: Contains C# code for a 'Hello World' application, including `using System;` and a `Main` class with a `Main` method.

The status bar at the bottom indicates 'GNU Emacs 22.0.91.1 (1486-pc-linux-gnu, GTK+ Version 2.10.6) of 2006-12-20 on rothera, modified by Debia'.

Is there something better?

Working with other IDEs

How do I get started?

- Make sure you have a Zend account
- Email me at kevin@zend.com (I have a bunch of invitations)

or

To use the Zend Cloud Services, you must first agree to the Terms. You can agree to the Terms by actually using the Zend Cloud Services. From that point onwards, Zend will treat your use of the Zend Cloud Services as acceptance of the Terms from that point onwards.

If you have entered into or enter into another license agreement with Zend that agreement shall not apply to Zend Cloud Services unless otherwise stated. If a service or product or part of any service or product under such master subscription agreement, unless otherwise stated, is delivered from an infrastructure different from the infrastructure underlying other Zend services, and its availability is not guaranteed, it does not constitute Zend Cloud Services.

If you are an early access program member, we will need your **early access program invitation key** - this alphanumeric string was included in your invitation email.

Invitation Key:

[I don't have an invite key, give me one!](#)

This alphanumeric string should be included in your invitation email
