

Zend Application Performance Audit

Performance, Security, Architecture/Scalability

Partner with the PHP thought leaders and innovators

Unlock the potential of PHP

Identify barriers to full productivity

Optimize Resource Utilization

All key Benchmarks Tested

Detailed Analysis

Written Reports with Recommendations

For detailed information see:
www.zend.com/services

The Zend Application Audit Services are a family of packaged services for evaluating the performance, of a single PHP application or code base against a series of benchmarks and criteria, and providing a comprehensive written report of audit findings and detailed recommendations.

What you don't know, can hurt you!

Growth and change in successful organizations can put strain on applications as they struggle to keep up with growing demand and usage. Performance problems may appear. Developers may be spending more time in fixing and maintaining the application rather than adding new functionality.

With these services, Zend helps the customer to identify barriers to full productivity of their PHP application, and provides them with options for removing those barriers and optimizing the performance. When your application is assessed by PHP experts, the root cause of performance problems can be quickly identified, and then addressed.

The Service Process

The audit begins with a detailed evaluation of your application, taking into account everything from usage volume to the operating system. All audit items are evaluated relative to Zend benchmarks by the Zend Professional Services consultant.

Once the application has been reviewed, the data is analyzed, issues identified, and recommendations developed. The result is a comprehensive report and recommendations which provide you with a detailed roadmap, which you can implement yourself, or work with Zend Professional Services to implement with you.

We will also provide a proposal for implementation of the recommendations by Zend Professional Services. Whether implemented by your team or by Zend Professional Services, you will have a detailed roadmap which puts you on the road to success!

What we look for

Zend Professional Services has established a set of standard benchmarks for evaluating each application or code base. Listed below are sample components for each audit.

Performance Audit Benchmarks	
Bottleneck identification	Load balancing
Database analysis	Caching techniques
Query analysis	I/O analysis
Potential Query Optimization	OS and file system performance
Communication bottlenecks	Code evaluation relative to coding best practices
Web server performance	Audit of executed PHP code itself; profiling of the scripts

The service is a fixed price service, for approximately 5 person-days, and limited to a code base of 50,000 Lines of Code or less. If a performance problem can be isolated to 50,000 Lines of Code or less, this service still applies. For applications larger than 50,000 LOC, ask your Zend Sales rep for a custom quote.

Because every customer's need is different, and every application is unique, the actual components used during the audit will vary based on customer need.

Features & Benefits

Features	Benefits
Certified PHP experts	Ensures the Zend consultants bring a significant, measurable level of expertise to your project Results in higher quality deliverables in a shorter period of time, so you have your results faster.
Objective, third party review of application	Unbiased evaluation of your application significantly reduces the risk of missing or ignoring potentially critical flaws.
Detailed written report, and recommendations	By knowing what the issues are, you can make informed decisions regarding next steps to address them and ensure that your applications run reliably and securely. Whether you decide to implement the recommendations yourself, or have Zend experts do so, you can be comfortable that by following the recommendations you have taken the right steps to improve the performance, scalability or security of your application

A full range of follow on services

In addition to Zend Application Audit Services, Zend Professional Services offers a full range of custom tailored services, including training and support services, as well as the Migration family of services, on-site and classroom training and Application Development Services..
