# Installing Zend Studio for Eclipse 6.0.1 as a Set of Plugins

Zend Studio for Eclipse can be installed as a set of separate plugins on top of an existing Eclipse installation. This allows you to use Zend Studio for Eclipse's features alongside your existing Eclipse-based tools.

## Prerequisites

The prerequisites for installing Zend Studio for Eclipse as plugins are:

- Java 1.5
- Eclipse 3.3 (e.g. "Europa")

## Installation Procedure

The following procedure describes how to install Zend Studio for Eclipse 6.0 on top of Eclipse 3.3.1 and above:

1. Launch Eclipse.
2. From Eclipse's Menu Bar, go to Help | Software Updates | Find and Install. The Install/Update dialog opens.

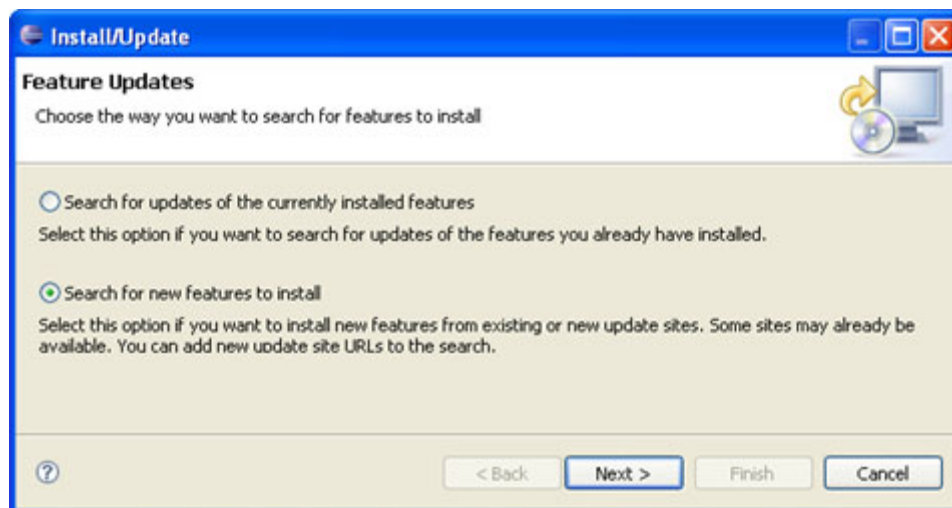

Figure 1 - Feature Updates dialog

3. Select 'Search for new features to install' and click Next. A list of available Update sites is displayed.

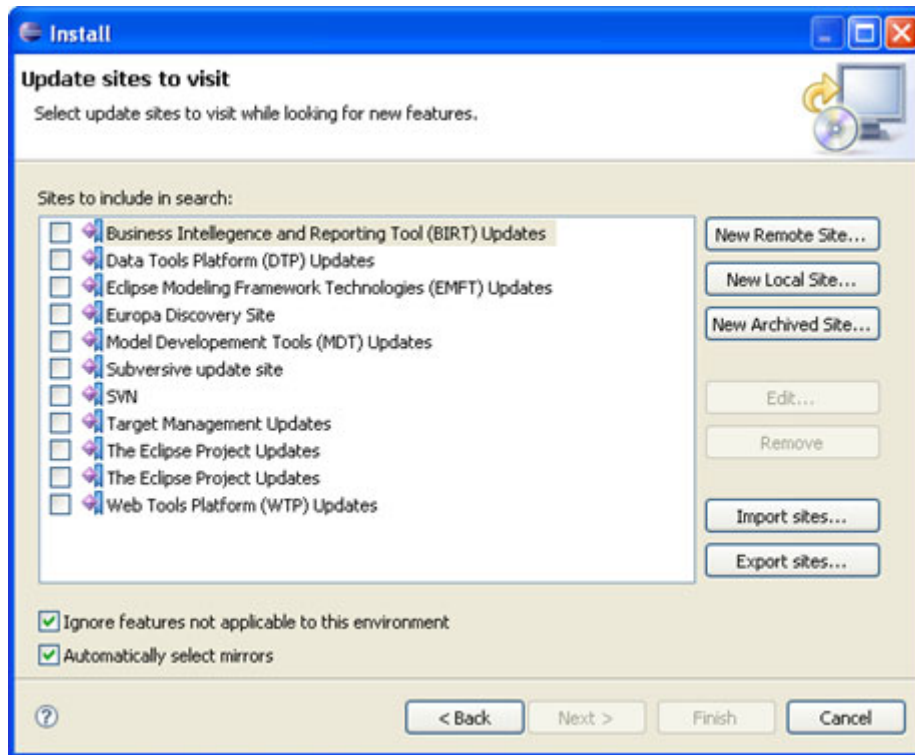

Figure 2 - Update Site list

4. Click the "New Remote Site" button.  
The New Update Site dialog is displayed.
5. Enter the following remote site information:
  - Name: Zend Update Site (recommended)
  - URL: <http://downloads.zend.com/studio/updates>

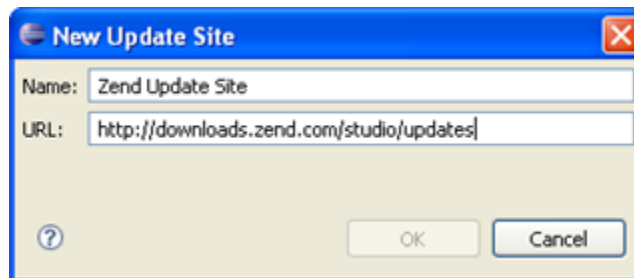

Figure 3 - New Update Site dialog

6. Click "OK".  
The Zend Studio Update site, containing Zend Studio components, is added to the Update sites list.

7. In the 'Sites to include in search' list, select both the newly created "Zend Update Site" and the "Europa Discovery Site".

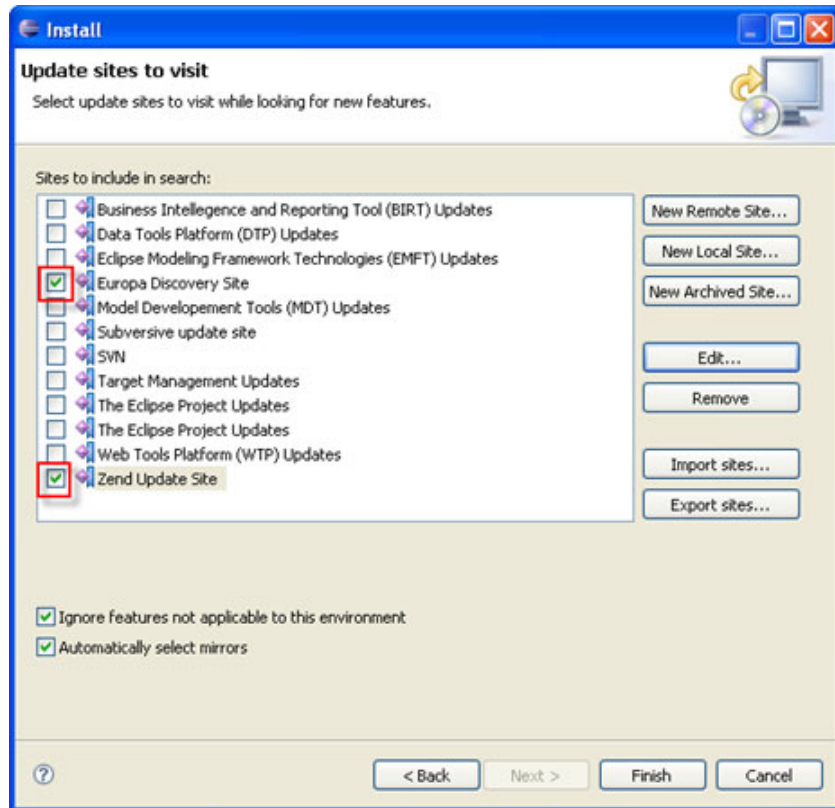

Figure 4 - Update Site Selection

**Note:**

The "Europa Discovery Site" contains all the 3<sup>rd</sup> party components included in Zend Studio for Eclipse, such as WTP (Web Tools project), BIRT (Business Intelligence and Reporting Tools) and more.

8. Click Finish.  
The Update Manager searches for Updates from the selected sites. The Updates Search Results dialog is displayed with a list of available features.

**Note:**

Depending on your settings, an Update Site Mirrors dialog might be displayed. If it is, select one of the available mirrors and click OK.

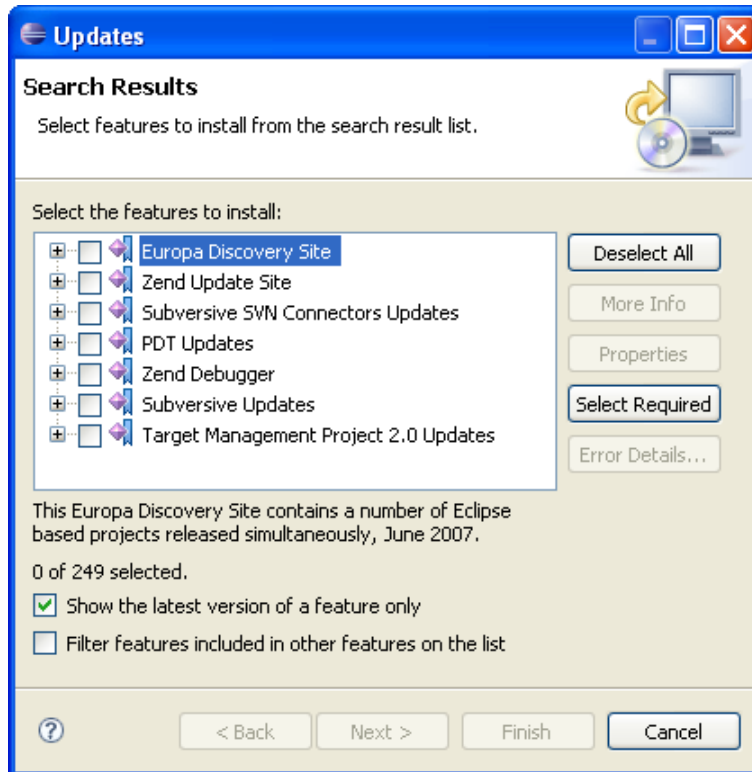

Figure 5 - Updates List

9. Select the following features from the list by marking the relevant checkboxes:
  - Zend Update Site (all)
  - Zend Debugger (all)
  - Remote System Explorer End-User Runtime 2.0.3 vXXX – under the Target Management Project 2.0 Updates | TM and RSE 2.0.3 category.

10. Expand all the other top-level nodes (this is required due to an Eclipse bug).

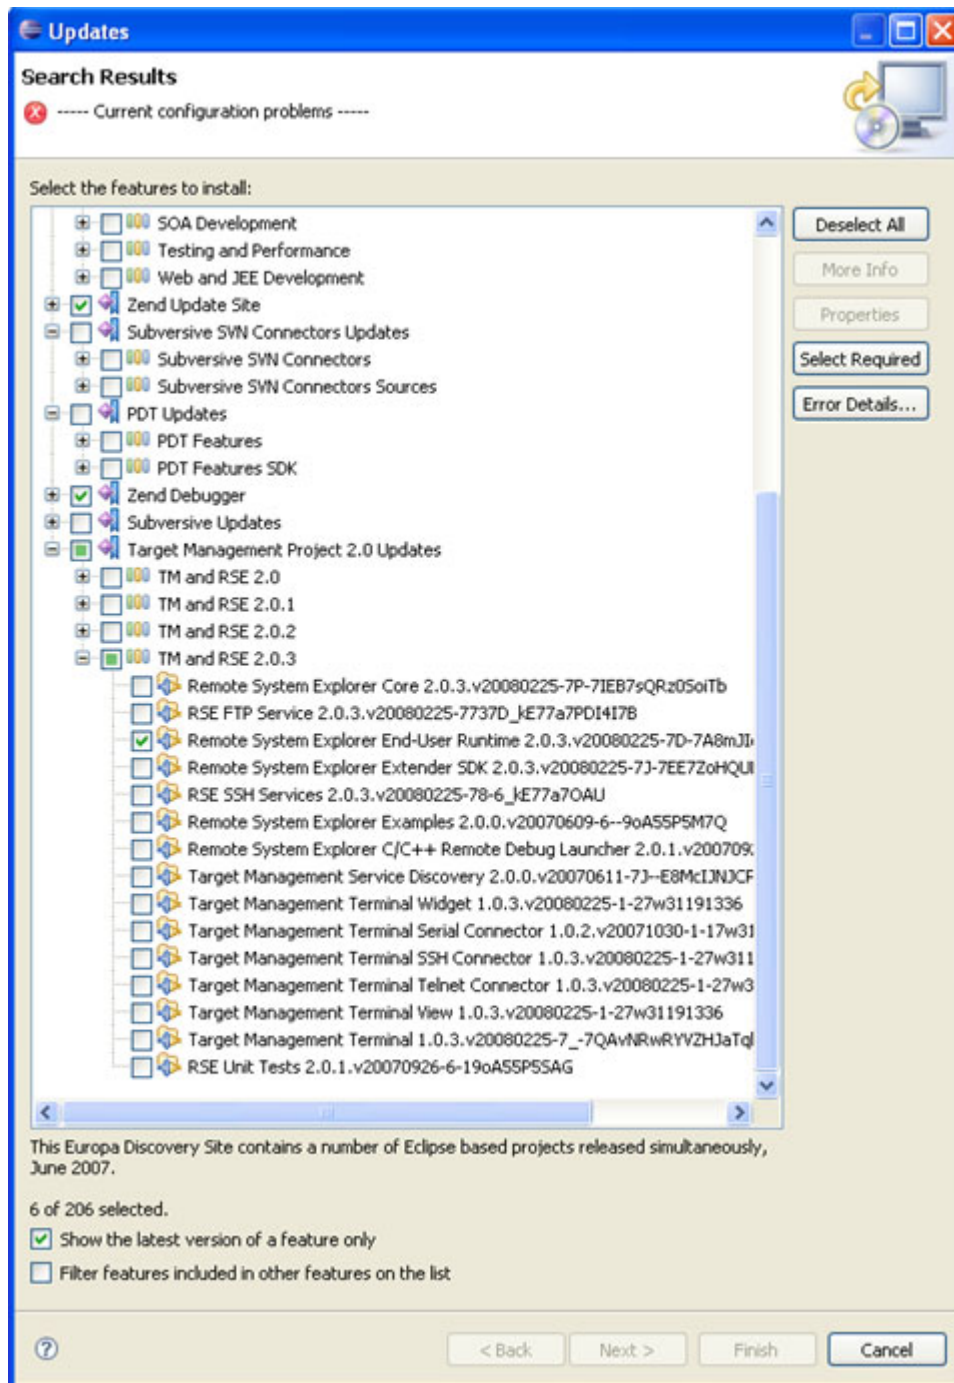

Figure 6 - Expanded Update List

11. Click 'Select Required'.  
All required features are automatically selected. It may take a few minutes for Eclipse to verify the required features.
12. Click Next to start the installations.  
Certain features may have license agreements, which will be displayed.
13. Accept the license agreements to continue.  
A list of features to be installed is displayed.

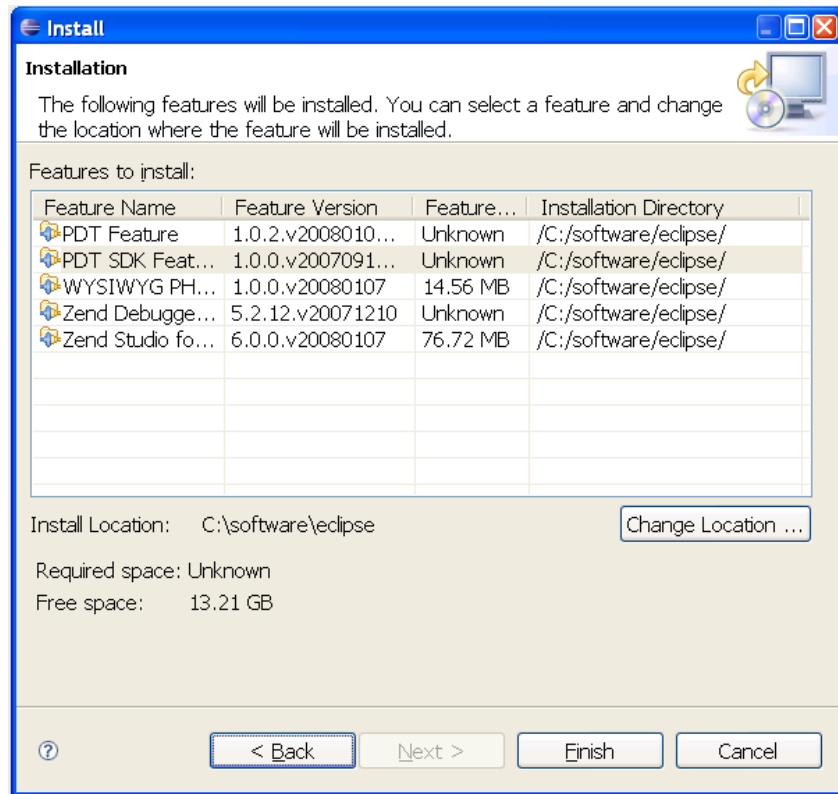

Figure 7 - Feature Install Confirmation

14. Click Finish to install all features.  
Once installation has completed, a dialog will appear with a request to restart Eclipse.
15. Restart Eclipse for all features to be loaded.  
All Zend Studio for Eclipse's features will be installed.

## Registering a license

Once you have completed the plugin installation, Zend Studio for Eclipse's features will be available for a 30 day trial. At the end of the 30 day trial, the professional features will be disabled. These include refactoring, getter and setter generation, new PHP element creation wizards, Zend Framework integration, profiling, PHPUnit testing, Zend Platform integration, debugging through tunneling, advanced code formatting, code galleries, organizing include statements, PHP/HTML WYSIWYG, and more.

To register a valid license and activate all Zend Studio for Eclipse features, go to Help | Register and enter a valid license key.

You can purchase a Zend Studio for Eclipse license from the [Zend Store](#) at <http://www.zend.com/en/store/software/studio>. In addition, if you are currently under maintenance for Zend Studio 5.5, you can receive a free Zend Studio for Eclipse upgrade license. Contact Zend's Support team at [support@zend.com](mailto:support@zend.com) for more information.

## Implications

A variety of 3<sup>rd</sup> party plugins can be installed on Eclipse that have never been tested alongside the Zend Studio for Eclipse plugins and may have an adverse effect on the Zend Studio plugins' behavior. If your Zend Studio plugins are not functioning properly, please inform the Zend Support team at [support@zend.com](mailto:support@zend.com), indicating the other plugins you have installed and the problems encountered, so that we can test and certify these plugins for future Zend Studio for Eclipse versions.
