

Zend Framework in Action

Rob Allen, Nick Lo, Steven Brown

432 pages

ISBN: 1933988320

SOMMARIO

Part 1 The essentials 1

Introducing Zend Framework 3

Introducing structure to PHP websites 4

Why use Zend Framework? 5

Everything is in the box 6, Modern design 6, Easy to learn 6, Full documentation 7, Simple development 8, Rapid development 8, Structured code is easy to maintain 8

What is Zend Framework? 9

Where did it come from? 9, What's in it? 9

Zend Framework design philosophy 15

High-quality components 15, Pragmatism and Flexibility 15, Clean IP 16, Support from Zend Technologies 16

Alternative PHP frameworks 16

Summary 17

Hello Zend Framework! 18

The Model-View-Controller design pattern 19

The model 20, The view 20, The controller 20

The anatomy of a Zend Framework application 21

The application directory 21, The library directory 21, The tests directory 21, The public directory 22

Hello World: file by file 22

Bootstrapping 22, Apache .htaccess 24, Index controller 25, View template 26

How MVC applies to Zend Framework 27

Zend Framework's controller 28, Understanding Zend_View 32, The model in MVC 35

Summary 39

Part 3 A core application 41

Building a website with Zend Framework 43

Initial planning of a website 44

The site's goals 44, Designing the user interface 45, Planning the code 47

Initial coding 48

The directory structure 48, The Bootstrap class 48, Running the application 53

The home page 53

The initial models 54, Testing our models 56, The home-page controller 59

Summary 63

Managing the view 64

Introducing the Two Step View and Composite View patterns 65

View handling with Zend_Layout 66

- Integrating Zend_Layout into Places 67
- Setup 67, Layout scripts 69, Common actions using placeholders 72, The homepage view script 76
- Advanced view helpers 78
- Controller integration 78, View script management 80, HTML header helpers 81
- Summary 86

Ajax 87

- Introducing Ajax 88
- Defining Ajax 88, Using Ajax in web applications 89
- A simple Ajax example 91
- Using Ajax client libraries 94
- Using Ajax with Zend Framework 95
- The controller 96, The view 97
- Integrating into a Zend Framework application 98
- The Place controller 99, Adding review rating HTML to the view script 101, Adding JavaScript to the view scripts 102, The server code 104
- Summary 106

Managing the database 107

- Database abstraction with Zend_Db_Adapter 108
- Creating a Zend_Db_Adapter 108, Querying the database 109 Inserting, updating, and deleting 110, Handling database-specific differences 111
- Table abstraction with Zend_Db_Table 112
- What is the Table Data Gateway pattern? 112, Using Zend_Db_Table 113, Inserting and updating with Zend_Db_Table 114, Deleting records with Zend_Db_Table 116
- Using Zend_Db_Table as a model 116
- Testing the model 118, Table relationships with Zend_Db_Table 123
- Summary 127

User authentication and access control 128

- Introducing authentication and access control 129
- What is authentication? 129, What is access control? 129
- Implementing authentication 130
- Introducing Zend_Auth 130, Logging in using HTTP authentication 131
- Using Zend_Auth in a real application 133
- Logging in 133, A view helper welcome message 137, Logging out 138
- Implementing access control 139
- Introducing Zend_Acl 139, Configuring a Zend_Acl object 141, Checking the Zend_Acl object 142
- Summary 146

Forms 147

- Introducing Zend_Form 148
- Integrated data filters and validators 148, Integrated error handling 150, Decorators to simplify markup 151, Plug-in loaders for customization 152, Internationalization 152, Subforms and display groups 152
- Building a login form 153
- Setting up paths 153, Our form view script 153, Updating the AuthController controller action 15, The basic login form class 155
- Filtering and validation 156
- Basic filtering and validation 156, Custom error messages 158, Internationalizing the form 159, Adding a custom validator 160
- Decorating our login form 162
- Zend_Form default decorators 162, Setting our own decorators 162

Summary	166
Searching	167
Benefits of search	168
Key usability issue for users	168, Ranking results is important 168
Introducing Zend_Search_Lucene	168
Creating a separate search index for your website	169, Powerful queries 171, Best practices 175
Adding search to Places	176
Updating the index as new content is added	176, Creating the search form and displaying the results 185
Summary	188
Email	189
The basics of email	190
Email simplified	190, Dissecting an email address 191
Introducing Zend_Mail	191
Creating emails with Zend_Mail	191, Sending emails with Zend_Mail 193
Building a support tracker for Places	195
Designing the application	195, Integrating Zend_Mail into the application 199, Adding headers to the support email 200, Adding attachments to the support email 202, Formatting the email 203
Reading email	205
Collecting and storing email	205, Reading email with our application 206
Summary	210
Deployment	211
Setting up the server	211
Designing for different environments	212, Using virtual hosts for development 214
Version control with Subversion	216
Creating the Subversion repository	217, Checking out code from the repository 218, Committing changes to the repository 218, Updating a local working copy 219, Dealing with conflicts 220, Getting a clean copy from the repository 222, Using branches 222, Externals 223
Functional testing	223
Functional testing with Selenium IDE	224, Automating Selenium IDE tests 226, Functional testing with Zend_Http_Client 227
Scripting the deployment	229
Summary	229

Part 3 More power to your application 231

Talking with other applications	233
Integrating applications	234
Exchanging structured data	234, Producing and consuming structured data 235, How web services work 236, Why we need web services 237
Producing and consuming feeds with Zend_Feed	237
Producing a feed	237, Consuming a feed 239
Making RPCs with Zend_XmlRpc	240
Using Zend_XmlRpc_Server	241, Using Zend_XmlRpc_Client 248
Using REST web services with Zend_Rest	250
What is REST?	250, Using Zend_Rest_Client 251, Using Zend_Rest_Server 254
Summary	256

Mashups with public web services 257

Accessing public web services 258

Zend_Gdata 258, Zend_Service_Akismet 260, Zend_Service_Amazon 260,

Zend_Service_Audioscrobbler 261, Zend_Service_Delicious 261, Zend_Service_Flickr 261,

Zend_Service_Gravatar 262, Zend_Service_Nirvanix 262,

Zend_Service_RememberTheMilk 262, Zend_Service_Simpy 262,

Zend_Service_SlideShare 263, Zend_Service_StrikeIron 263, Zend_Service_Technorati
263, Zend_Service_Yahoo 264

Displaying ads with Amazon web services 264

The Amazon model class 265, The Amazon ads view helper 266, Caching the view helper
267

Displaying pictures from Flickr 270

The Flickr model class 270, Using Flickr in an action controller 271

Using Zend_Gdata for Google access 274

The YouTube API in an action controller 274, The video categories page 275, The video list
page 276, The video page 278

Summary 279

Caching: making it faster 280

Benefits of caching 281

How caching works 281

Implementing Zend_Cache 284

Zend_Cache frontends 284, Zend_Cache backends 295

Caching at different application levels 296

Choosing what to cache 296, Optimal cache expiry 297

Cache tags 298

Summary 298

Internationalization and localization 299

Translating languages and idioms 300

Translating languages 300, Translating idioms 301

Using Zend_Locale and Zend_Translate 301

Setting the locale with Zend_Locale 301, Translating with Zend_Translate 303

Adding a second language to the Places application 305

Selecting the language 305, The LanguageSetup front controller plug-in 308, Translating the
view 310, Displaying the correct date with Zend_Locale 312

Summary 314

Creating PDFs 316

Zend_Pdf basics 317

Creating or loading documents 317, Creating pages in your PDF document 317, Adding
document meta-information 318, Saving the PDF document 319

Building a PDF report generator 320

Our report document model 320, Our report page model 321

Drawing text on the page 322

Choosing fonts 322, Setting the font and adding text 323, Adding wrapped text 324

Working with color 324

Choosing colors 325, Setting colors 325

Using Styles 326

Drawing shapes 326

Drawing lines 327, Setting up dashed lines 327, Drawing rectangles and polygons 328,

Drawing circles and ellipses 331

Rotating objects 332

Adding images to the page 332

Drawing objects within clipping masks 333
Generating PDF reports 333
Summary 335

appendix A A whistle-stop tour of PHP syntax 337
appendix B Object-Oriented PHP 350
appendix C Tips and tricks 367
index 381
